PRESS RELEASE

Metabo's Automotive Polisher

High torque dry polisher for polishing metal

June 9, 2020 – West Chester, PA –
Metabo Corporation, a leading German international manufacturer of professional-grade cordless and corded hand-held power tools and accessories in the US, announces its Variable Speed High Torque Automotive Dry Polisher, PE 15-20 RT (615200420).

“The PE 15-20 RT has the ideal speed range to tackle paint and automotive surfaces, with lower speed for weathered paint surfaces and high speed for high gloss finishing. The development of the Variable Speed High Torque Polisher came to fruition through collaboration with a major sports car manufacture, where the finish must be perfect,” says Terry Tuerk, Metabo’s Senior Product Manager.

The planetary gearing allows for more efficient power transmission and provides quieter operation. Also, the slim grip and rubberized front gear housing offer superior handling, even during extended operation. The polisher has a step-less variable speed trigger, and variable speed setting for a range of 0 - 300 up to 0 -1,900 rpm. The 13 Amp motor produces 133 in-lbs. of torque through the planetary gearing and only 80Db for quiet performance.

The PE 15-20 RT includes VTC electronics (Vario-tacho-constamatic) - Metabo’s exclusive technology that maintains RPM under load. The polisher has overload protection with LED display, which protects the motor from burnout prolonging the tools life, as well as a soft start feature that allows for a smooth, precise start-up. The PE12-20 RT also includes a lock-on switch with restart protection, which prevents the tool from starting on its own in the event of a power interruption.
